# Cargo: Fan Design

Air flow: 36.2 CFM

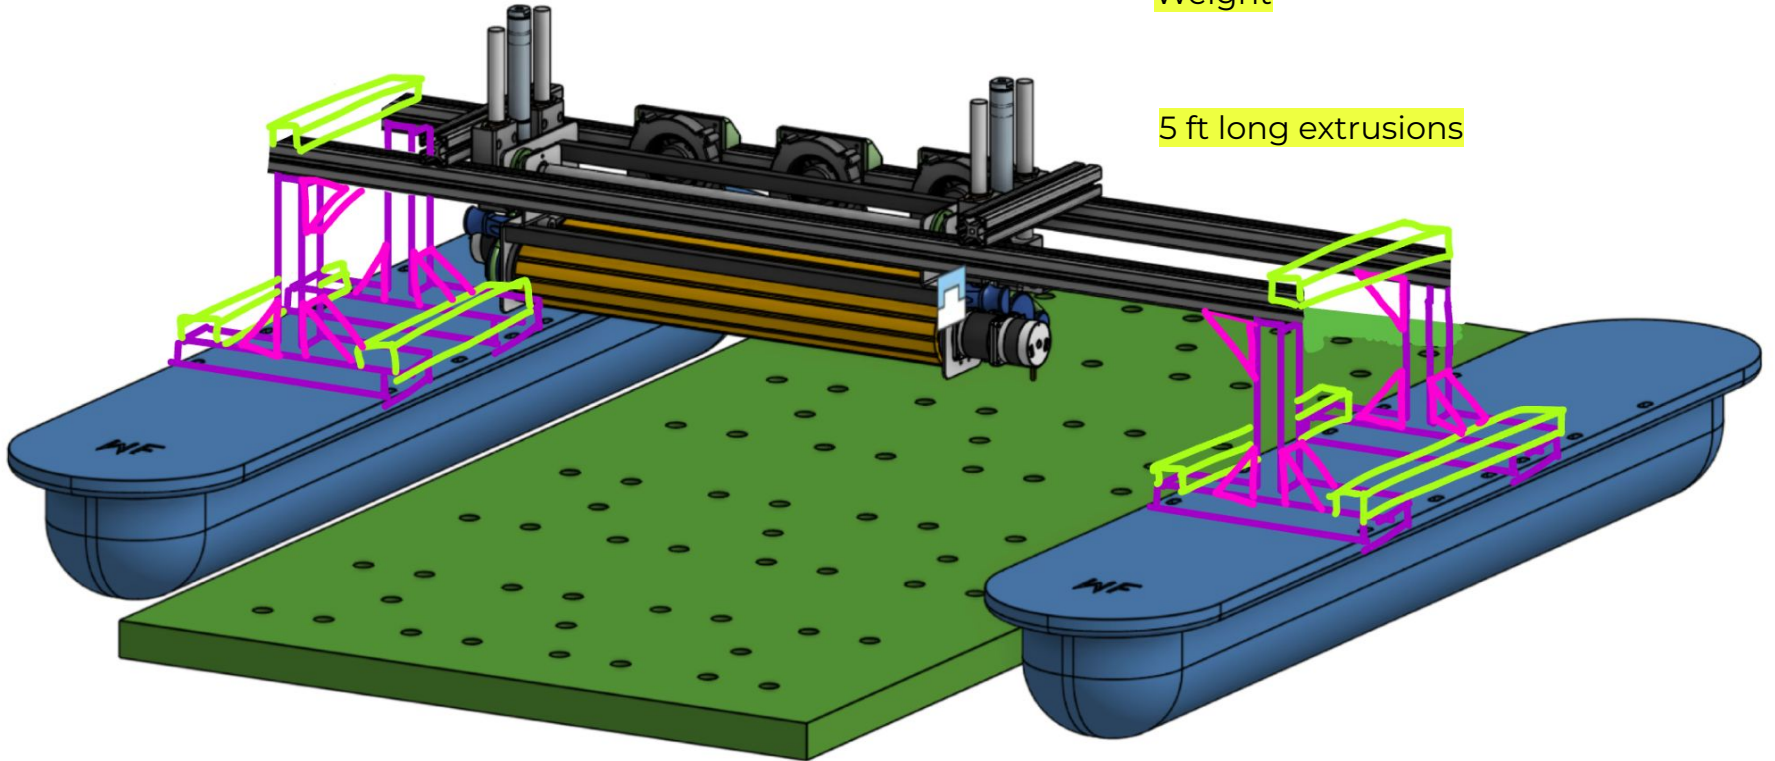

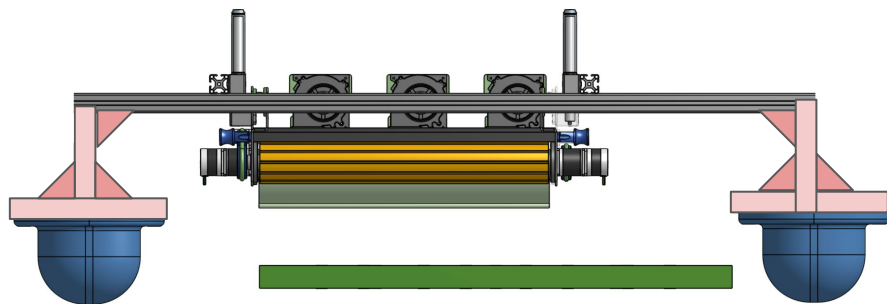

# Pontoon Attachment

Worried about stability and moment created by uneven weight? -> center the robot?

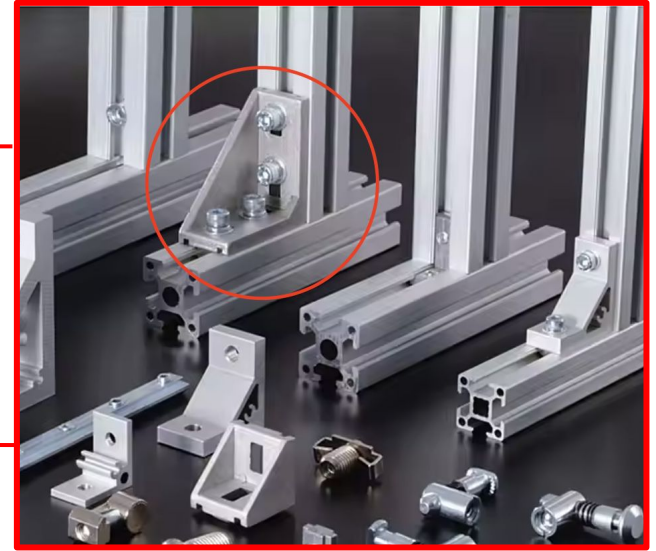

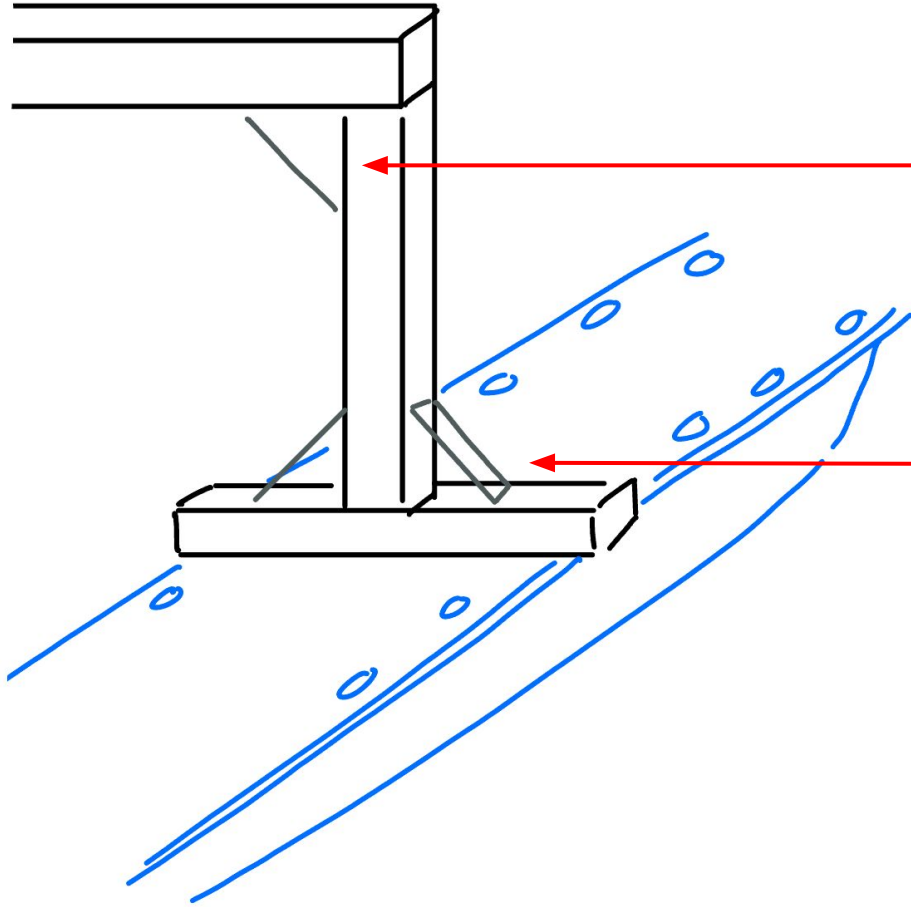

Weight

5 ft long extrusions

Corner brackets for strength -> the larger the triangle the better

Bolt holes (some are cracked -> we will need to strengthen the cracks)

Tried attaching extrusions to the pontoons -> okay but skews. May need extrusions going lengthwise too.

**Thank you!**
